

LINEA CONFEZIONATRICE FARDELLATRICE SLEEVE WRAPPER LINE

Linee fardellatrici composte da saldatrice e tunnel di termoretrazione indipendenti con alimentazione tramite uno spintore oppure tramite nastro frontale. Sono realizzate nei modelli semiautomatici e automatici, direttamente collegate alle linee di produzione e permettono l'esecuzione di pacchi di diverse forme e misure da confezionare in relazione alle caratteristiche di produzione. I nostri tunnel a corredo delle fardellatrici offrono elevata efficienza di termoretrazione dei films, unita ad un ridotto consumo energetico.

Sleeve wrapping lines, composed of independent wrapper and shrink tunnel to be feed by pusher or by front conveyor.

Models realised for half automatic or automatic packing, directly connected to production lines, allows goods of different shapes and sizes to be wrapped, in relation with production features.

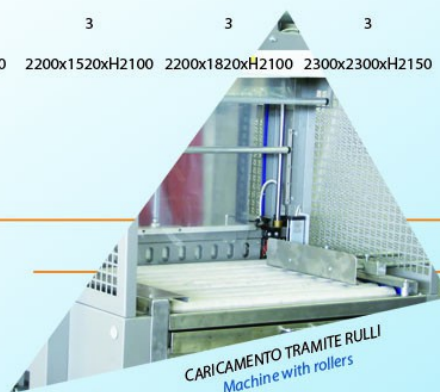

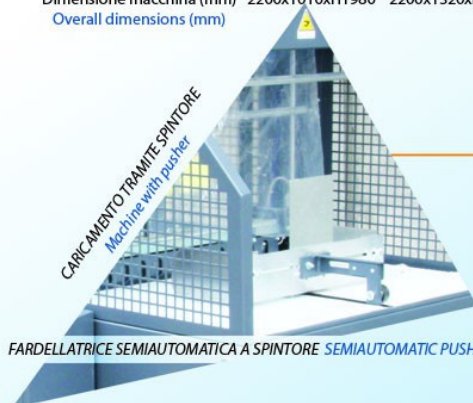

Our tunnels supplied with the wrapping machines have high shrinking efficiency, jointed to reduced power consumption.
